

## **It Doesn't Matter What Your Message Is If Customers Can't Hear It**

### **Hear the difference**

We've thought of everything to ensure your audio will be crystal clear in any environment. Typical speakers may sound good in your home or office, but when placed in a public space sound bleed and fluctuating ambient noise levels usually lead to trouble. Our Maestro is the result of our engineers' quest to create the ultimate acoustic solution for all environments.

### **Get your audio under control**

Your audio will never be too loud or soft with the built in Smart Volume. Just turn it on and it's like having a full time employee controlling the volume 24 hours a day. When the environment grows louder the volume automatically increases. When it gets quieter, the levels decrease.

### **More precise than speakers**

This high fidelity stereo system includes a self powered six speaker dual array system with a built in woofer. Unlike regular speakers that send sound everywhere, the array directs sound just where you want.

### **Starts when you approach**

Add the optional Self-Starter and your program will automatically restart each time a person approaches the speaker. Perfect anywhere you want your message to be heard in its entirety.

### **Always the right volume**

With built-in compression the volume will always be uniform and free from dynamic swings even when the input audio is from different audio sources with varying recording levels. Our circuit automatically boosts volume levels that are too quiet and lowers audio levels that are too loud.

### **Computer programmable**

A user friendly interface provides access to the firmware through a standard USB port. Customize speaker functions and update as necessary, even from a remote location! Program the minimum and maximum volume levels. Change the response time from slow to fast. Even change the amount of focus/bass!

### **Send and receive vital information**

Control the performance of your Maestro(s) from a single remote location. If your system is networked you can send updates and receive information such as the busiest times of the day. Plus a whole lot more.

### **Sound business decision**

Want to get better results out of your audio? Make the sound business decision. Invest in the most effective audio solutions in the world from Brown Innovations.
